

Practical AI for Local Businesses

We help small and mid-sized businesses in the Upstate — Spartanburg, Greenville, and surrounding areas — use AI and better systems to get more done with the team they already have.

No expensive software, no tech department, no jargon.

unleashingflow.com

STEP 1 — FIND

Find the bottleneck.

Every business has one or two constraints that quietly cost more than everything else combined. We find exactly where your time and money are leaking — using your real data, not guesswork.

STEP 2 — FIX

Build the fix.

We build the solution ourselves — not a recommendation deck. The right tool for your business, aimed at the one place it will actually move the needle.

STEP 3 — FOLLOW UP

Make it stick.

Technology projects fail when the consultant disappears. We stay to make sure the new system gets used, adjust as you grow, and find the next improvement.

FIVE WAYS TO START

AI Audit

A clear-eyed look at your operations: where AI and automation can save you hours each week — and where they can't. We'll tell you that too.

Dashboards

Your key numbers, live and in one place, so you know how the business is doing today — not at tax time.

Custom Tools

Simple apps built around how your business actually runs — replacing the spreadsheets, sticky notes, and "it's all in my head" systems.

Team Upskilling

Hands-on training so your people use AI tools confidently and safely in their day-to-day work.

Online Presence Revamp

Your website, Google ranking, and reviews, working together — so the customers searching for what you do actually find you, and like what they see.

We're local, and that matters. Restaurants, gyms, shops, service companies, professional practices — we work in person, in plain English. *Free up the owner's time, make the numbers visible, grow without the chaos growing with it.*

Run by Elliott English and Mac Steele — hands-on technical expertise with deep roots in the local business community.
